

Intelligent Console. Mode of operation

CONS 100 drives serial device

CONS 100 has been programmed in order that, pressing one of the 12 buttons, a command string is sent to the serial device. To each button is associated a specific string. In this case the parameters of the serial line can be set in order to be compatible with those of the device under control.

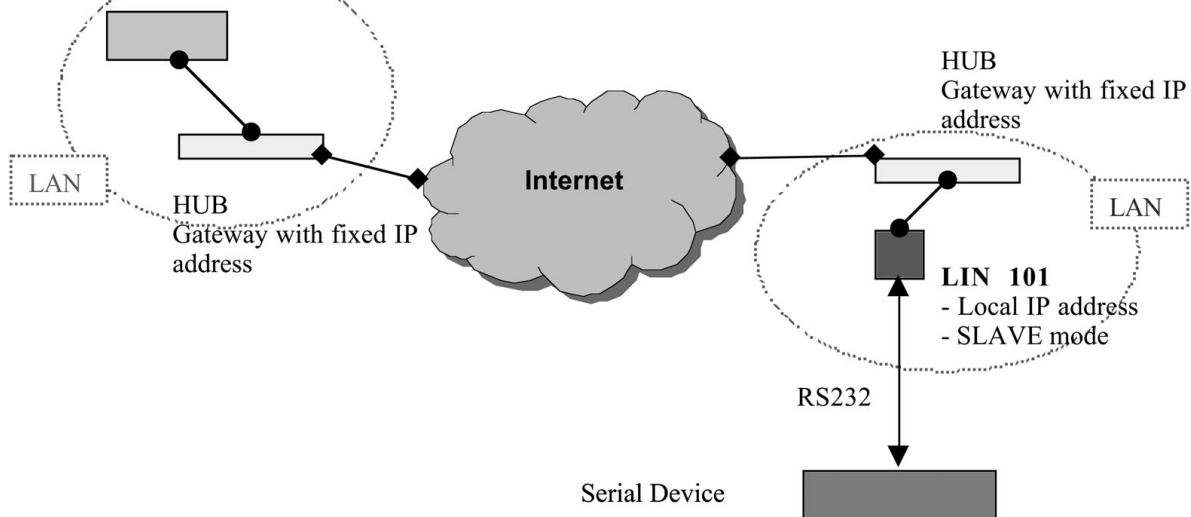

CONS 100 drives serial device through

Another one application of CONS 100 is the control, through Internet, of a general purpose device that presents a serial interface only. In this case the device must be interfaced by a LIN 101.

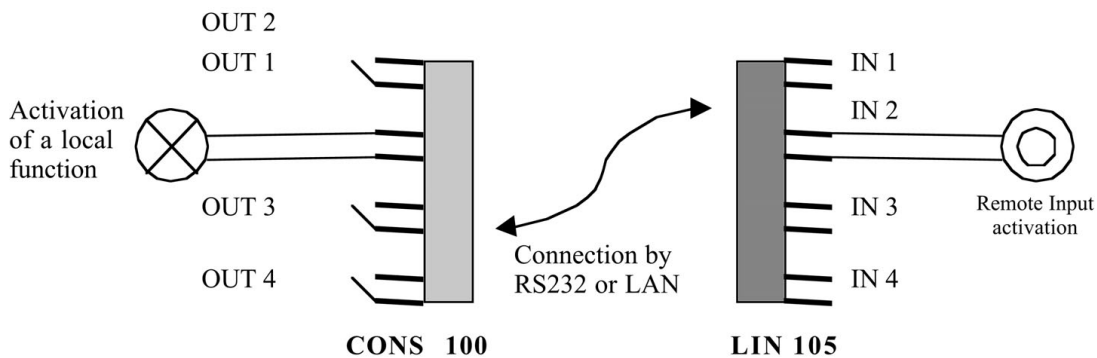

CONS 100 Intelligent Console mode

- Local IP address
- MASTER mode

2. LIN 105 Input status repetition

In a system where CONS 100 drives a LIN 105, CONS 100 repeats the status of the 4 inputs of LIN105. When an input is activated the correspondent led on CONS 100 lights on and the respective contact is closed. This permits to activate a local function.
