- Play While Rec | Instant Replay
- Up to 4 Configurable Channels
- Matrix and Video Switchers Control
- Watch Folder
- Sharing on LAN
- Fast Trimming for Highlights
- Real Time Cross Conversion
- Playlist Save and Recall
- Auto Update Playlist

## OVERVIEW

**YOUPLAY SERVER** is the high-end solution of the **YOUPLAY** family. Besides the maximum versatility of playout, essential feature of **YOUPLAY** multimedia engine, **YOUPLAY SERVER** supports a wide range of audio and video codec and delivers great performances when capturing signals, both in Standard and High Definition. Since **YOUPLAY** was born as a multichannel software, a capture card with multiple in and out makes “play while rec” situations easily manageable: users can send a file to the playout when this file is still being captured. Just a few seconds delay will occur and **YOUPLAY SERVER** will thus be an efficient solution of Instant Replay. Multichannel solutions mean maximum versatility in the definition of inputs and outputs, allowing a very dynamic selection and all intermediate configurations from “4 IN / no OUT” till “no IN/ 4 OUT”. Through a network connection it is possible to control routers and Blackmagic™ video mixers, setting both the clips beginning from the mixer (slave mode) and the channels switching when the clips start (server mode). The open protocol allows the playlist management: saving, loading, automatic generation from external software tools. Compatibility with Sony™ RS-422 and VDCP protocols makes of **YOUPLAY SERVER** a tapeless recorder that can be controlled by products of the most important brands, such as the control surfaces of JLCoope™ or the Grass Valley™ video mixer. Crucial solution for news, talk shows, exhibitions, sport events...

## TECHNICAL SPECIFICATIONS

PHYSICAL	
<b>1 CHANNEL VERSION</b>	
Dimensions:	1 RU Dell R320 42x40x4,5 cm (LxWxH)
Power:	110-220 Volt- 120 Watt
Video board:	Blackmagic Decklink SDI - 1 x SD/HD-SDI + Analog + HDMI
<b>2 CHANNELS VERSION</b>
