

EOS-FZ E adapter with electronic iris control function for Canon lens

Canon EOS lens mounts onto SONY FZ series (F3,F5,F55)video camera

The electronic adapter can mount Canon EOS lens onto SONY FZ series video camera, which has built-in aperture gear that can electronically control lens aperture.

EOS-FZ E

Aperture control gear

The adapter has a built-in aperture control gear which can electronically control lens aperture without delay after mounted the EOS lens.

USB external power supply interface

You can use the adapter after supply power by connecting USB interface on the adapter to USB interface on the camera body with USB wire.

USB interface on the adapter

After mounted the adapter onto the camera body, first insert USB wire into the adapter then turn the lock ring of PL mount on the camera body clockwise.

USB interface on the camera body

After connected the USB wire to the adapter interface, insert the other end of USB wire into USB interface on the camera body (put SONY F5 for example in the above picture)

Assembly finished

Above picture is an effect picture that the adapter is mounted onto the video camera and USB wire is inserted.
