

Hand grips and their Light-Weight Supports (HD).

Safe and convenient support for handheld shooting

The special **HD Light Weight Supports** safely take the handles through the extra ridged rod clamping and base plate. The heavy-duty aluminium rods have 15 mm standard diameter and 205 mm of length. The V-mount is compatible to the camera's tripod adapter. For stable connection to the tripod and quick and easy change from handheld to tripod use, we suggest our patented QuickLock Plate (s. page 26).

The **Handgrips** are extensible and adjustable in any direction and angle. The set comprises one short grip for the left camera side and a long twice adjustable grip for the right side. The latter is equipped with a start/stop knob for Broadcast cameras when using prime or cine-style lenses.

A further optional extension for the left grip is available.

Light-Weight Support (HD)

Set hand grips with mounts to connect to the base plate of the HD Light-Weight Supports

Components:	Article no.
