

LCGⁿ

Value-Priced Broadcast Quality System Ideal for Entry Level Productions

Easy. Convenient. Professional.

The Right Features at the Right Price

Some companies may be talking about digital television upgrades with added expense and complexity. However, if it is a standalone, analog video character generator that you want, then Compix has what you're looking for. The LCGⁿ meets the standard definition needs of the broadcast, cable, house of worship, government, and education communities who have found that analog video is perfect for their needs.

No Quality Left Behind

Just because LCGⁿ is based on standard definition video does not mean they have standard levels of performance. Every LCGⁿ comes with GenCG, an easy to learn and easy to use software application found in our more powerful systems. GenCG is a powerful design, layout, and playback software package combined into a single and simple user interface. With the included graphic creation tools, the user can set up an entire graphics presentation offline and easily take those graphics immediately to air while editing the next on-air series.

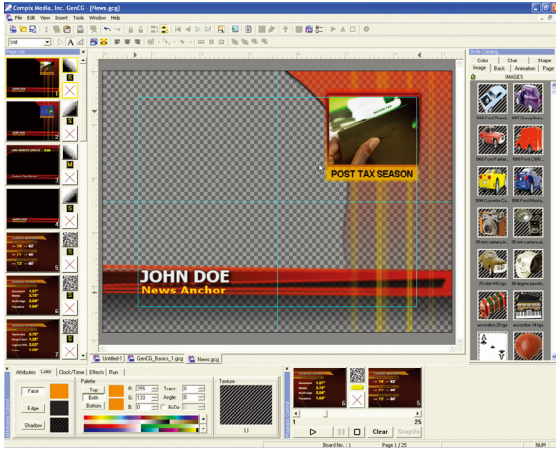

Compix LCGⁿ Makes It Easy

Built to be easy to use and easy on your budget, the LCGⁿ is designed especially to deliver your graphic needs. The LCGⁿ system is a ready-to-go character generator; all LCGⁿ systems have been fully assembled, configured, and tested before they leave the Compix factory. Just insert the LCGⁿ into your broadcast chain, begin creating your graphics, and get on air. From out of the box to on the air, nothing is faster to setup, easier to use, or more worry free to own than an LCGⁿ from Compix.

Compix LCGⁿ Product Highlights:

- Intuitive GUI with WYSIWYG layout
- 260+ effects including fade, roll, and crawl
- Multilingual Support*
- Icon-based drag-and-drop tools
- Use upstream or downstream of the switcher
- Logo generation with optional NewsScroll software - up to two data crawls automatically updated from text files or RSS feeds
- Automation and third-party interfacing capability via optional AutoCast software, for automated and semi-automated use
- Free offline graphics license with registration
- Pre-assembled and pre-configured turnkey systems

* Please contact Compix Media for a list of supported languages.

GenCG

Every LCGⁿ comes with our GenCG software, which gives you sleek fonts, colorful backgrounds, and professional templates for instant use.
