

LIN 102 is an interface able to energize 4 dry contacts through LAN or by RS232.

There are four basic ways to work with the LIN 102:

- Commanding the 4 dry contacts in Windows OS through virtual serial port.
Virtual serial port can be created by VSPD software included in the installation tools provided.
- Commanding the 4 dry contacts in both Windows and other OS, running with a software able to manage directly UDP/IP and TCP/IP protocols
- Commanding the 4 dry contacts directly by RS232
To command the 4 dry contacts, the software running must comply the Elpro protocol.
The Elpro protocol is available in the installation tools provided.
- LIN102 acts as RS232 / LAN interface to command remote devices
