

LIN 103 is an interface able to energize 8 Schuko sockets through LAN or by RS232.

There are three basic ways to work with the LIN 103:

- Commanding the Schuko sockets in Windows OS through virtual serial port.
Virtual serial port can be created by VSPD software included in the installation tools provided.
- Commanding the Schuko sockets in both Windows and other OS, running with a software able to manage directly UDP/IP and TCP/IP protocols
- Commanding the Schuko sockets directly by RS232

To command the Schuko sockets, the software running must comply the Elpro protocol.

The Elpro protocol is available in the installation tools provided.
