

Magic DaVE 4A & 4D

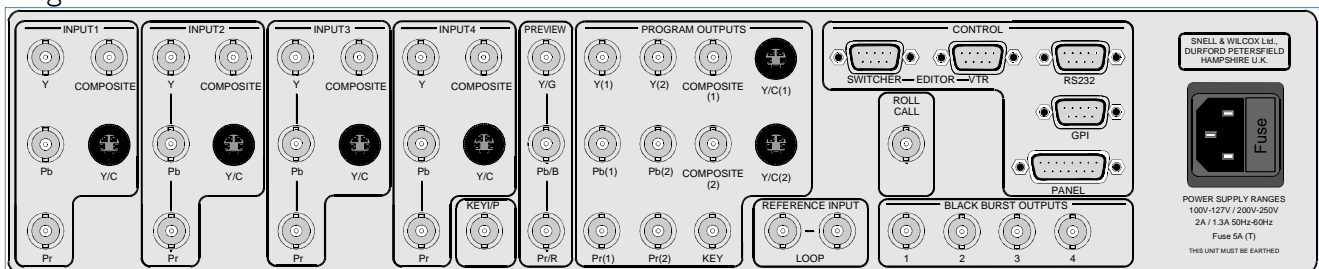

DVE and Switcher

Powerful digital video effects creation

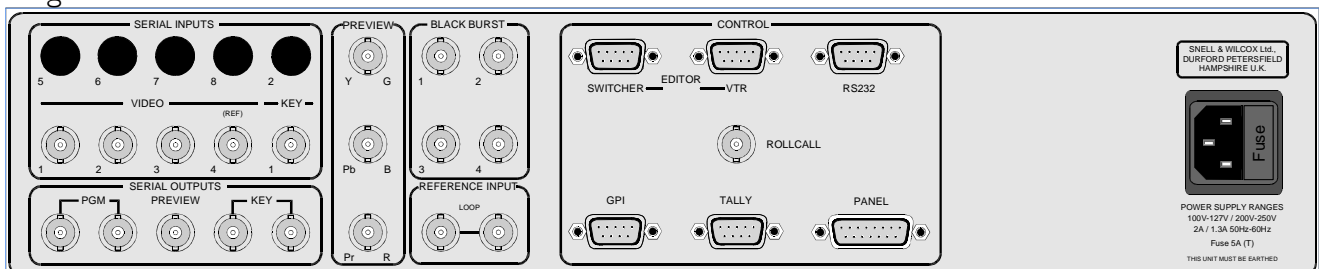

The Magic DaVE 4 series is a range of compact, powerful, easy to use DVE/switchers which provide exceptional performance and features at an economical price. Versions are available for either analog, composite and component, or digital input/output. Analog versions are available for both NTSC and PAL. An additional benefit is that, with analog component inputs, both 525 and 625 operations are supported in the same equipment. An option card provides additional inputs as well as extended wipe patterns and trails and sparkle effects. Housed in only 2RU of rack space and with a compact user controller, Magic DaVE 4 series are ideal for outside broadcasts, newsrooms and sports applications as well as post-production suites. Compact control panel also available for space critical applications.

Magic Dave 4A Mainframe

Magic DaVE 4D Mainframe
