STEADICAM FLYER

Steadicam inventor, Garrett Brown, on the Flyer Arm:

"I'm very proud of this product. It's been in development for several years and the prototypes have been secretly (and strenuously) tested in some of the most demanding locations on earth: (New York City and Bhutan!). The Flyer arm is engineered for affordable mass-production but it's tough and capable, with an astonishing, ball-bearing smooth, thirty-inch, top-to-bottom range of travel. For the first time, operators of light rigs can enjoy the same feel and tool-free performance as our top \$18,000 arm. If you close your eyes, you can't tell the difference (except "That" muscle won't be sending you the usual telegrams!)

Contact Frank Rush at Tiffen Steadicam to arrange a personal demonstration of the brilliant new-generation Steadicam Flyer and its revolutionary arm.

The Revolutionary New Steadicam Flyer Arm

High-end features for the new, affordable Steadicam Flyer Arm:

- Frictionless, silky-smooth iso-elastic performance
 - Huge 30" double-section lifting range
 - Tool-free one-touch lift-adjustment for each section.
- Professional tool-free, two-axis trim of arm-to-body angle.
- Lightweight design
- 16:9/4:3 color monitor
- Aluminum center post
- Low mass gimble
- New arm / vest interface system
- Complete system for normal operation
- Operates in standard and low modes

*"The Flyer is the undisputed lightweight champion
- everything else out there is a toy"*

Peter Abraham, Steadicam Operator/Instructor

*"The Flyer arm has made possible a new era of visual expression
- another breakthrough from the master, Garrett Brown"*
