

1:10 Balanced Stereo Audio Distributor

VM-1120

The Kramer VM-1120 is a high performance Distribution Amplifier for Balanced Audio Signals using XLR connectors. The machine offers high performance and flexibility, with front panel accessible controls. Using a simple front panel switch, it can be configured as a 1x10 for stereo signals, or as a 1x20 for mono signals. In either mode, its purpose is to accept a single input and provide identical outputs for a wide variety of studio and

live applications.

State-of-the-art Bi-Fet amplifying circuitry, and a high power discrete buffering system make the VM-1120 an excellent performer. All circuitry is active with no transformers thus ensuring hum-free, full bandwidth operation. It is rugged, dependable, and is housed in a professional rack mountable enclosure requiring two vertical spaces in a standard 19" rack.
