

Willi Go is foldable!

Willi Go on Master Track

Willi Go with ABC-Light Crane

Willi Go is ready for travel!

Technical details:

Size of base plate: 77 x 69 cm
 Length of tracks: 6.4 meters
 (track length can be increased)
 Length of each track element: 83 cm
 Curves: 1/8 of full circle with 3.15 m radius
 Size packed: 85 x 50 x 24 cm
 Weight: base plate with tracks ca. 15 kg
 Max load capacity: 200 kg

(all technical data are liable to variations without prior notice)

Willi Go

Willi Go is a compact and light dolly system conceived for quick and easy use: you can mount the light dolly on your own and lay out 6.4 meters of quick tracks in around two minutes. Whether you want to make a smooth moving shot with the camera on your tripod or on a light crane, Willi Go will allow you to work on locations wherever you are and with the least effort.

The track system

The ABC tracks have a diameter of 30 mm and come folded in a length of 83 cm. The tracks are quickly unfolded to a length of 6.4 meters (standard included in the package) as they are connected together with an elastic cord. This also makes it impossible to lose any parts. Once you have laid the tracks, Willi Go will automatically centre the required distance.

For very rough terrain we suggest the use of the Master Track system tracks (by Movie Tech) which are optional. Willi Go fits perfectly on tracks with the standard width of 62 cm. You may also use the system on inflated plastic tubing dolly tracks with a diameter between 20 and 40 mm, Willi Go is a well tested universal system.

Willi Go – the concept

Willi Go was conceived with special attention to three very important requirements of the modern video and film industry, i.e. the system must be:

light • compact • universal

Light: The base plate consists of special birch wood in 15 layers. This light and robust material allows a load capacity of up to 200 kg.

Compact: The base plate is foldable thanks to the stainless steel connection between the two wood plates forming Willi Go, you can fold the system and comfortably carry it under your arm. Also, you will be able to fit the case together with the standard tracks even in a small car.

Universal: Willi Go has three metal rest-plates where you will be able to fit any kind of tripod. It also has three holes ready for connecting a Euro mount (optional) to allow other creative uses of the system.

You cannot do without Willi Go whether on travel or filming in your own studio!

The company ...

ABC Products has been active in studying solutions for the moving camera technique for many years becoming an almost unchallenged expert in the field. Many television companies as well as private video and film studios appreciate the solutions that ABC Products is able to provide.

Some of our products:

Balance systems (HandyMan)

Hand-carried or body-harness system for different camera weights.

Light Cranes

The lightest cranes in the world, in different lengths, from the consumer crane up to the professional crane with remote-head systems.

ABC Products is also able to find solutions for many other filming situations which have one thing in common:

filming with the moving camera!
